ARTCRAFT FLEET TECHNICAL BROCHURE · SERIES #12

StudioCraft v1.0

Shared project + universal canvas host (Pure-Rust ArtCraft, v0.2.0)

v1.0	3 Crates	2358	6-Gate
RELEASE VERSION	WORKSPACE TIERS	PURE-RUST LOC	ARTCRAFT VERIFIED

Repository: `D:\Dev\repos\studiocraft` · **Standard:** `CRAFT_BROCHURE_STANDARD.md` · **Compiled via:** `BookCraft v0.5.0`

Shared project + universal canvas host (Pure-Rust ArtCraft, v0.2.0)

One `.studiocraft` project, natives preserved both ways. v0.2 is a real studio:
7-view egui host (Projects / Handoff / Adapters / Chat / Skills / Help / Logs),
12 MCP tools + CLI verbs over one `dispatch`, 6 guided skills, Fleet LLM card,
contract + workflows + chat docs.

- Photo <-> Vector editable (native). Light = settings + LUT preview.

Design/Pdf/Word/Deck/Grid/Effect/Film/Cad/Sound = companions (pointer JSON, v1).

- Failed handoff / cancel / unsaved / unsupported / companion-target blocks with

reason. Never flattens. Revision is `checked_add` bump after verified trip.

- Storytold engines stay official (`storytold-ref`). StudioCraft is `fleet-owned`.

No forks. Never edit `D:\Dev\repos\_upstream\craft-launcher`.

Quickstart

```
just check
just test
cargo run -q -p studiocraft-mcp -- status
cargo run -q -p studiocraft-mcp -- caps
cargo run -q -p studiocraft-mcp -- skills
cargo run -q -p studiocraft-mcp -- init --path D:/tmp/demo.studiocraft --name demo
cargo run -q -p studiocraft-mcp -- open --path D:/tmp/demo.studiocraft
cargo run -q -p studiocraft-mcp -- handoff-check --project D:/tmp/demo.studiocraft --
from photo --to vector
cargo run -q -p studiocraft-mcp -- llm-models --provider ollama
cargo run -q -p studiocraft-app -- --smoke
```

MCP stdio: `studiocraft-cli mcp` (`initialize` -> `tools/list` -> `tools/call`).

Dotted aliases accepted (`studio.status`, ...).

Layout

- `crates/studiocraft-core` L1 `dispatch` (project, adapters, handoff, skills, workflows, llm)
- `crates/studiocraft-mcp` L2 CLI + stdio (12 tools)
- `crates/studiocraft-app` L3 egui host (in-process, `--smoke`, no ports)
- `docs/` PRD + TOOLS + PARITY + UI_PARITY + CONTRACT + WORKFLOWS + SKILLS + CHAT
- `installer/installer.nsi` current-user NSIS, no admin

Product Requirements & Architecture Specification

Problem

Paint in PhotoCraft, edit vectors in VectorCraft, return to painting without export/import/reconcile. From `storytold/craft-launcher#1233`.

v1 scope (Tier 1)

- One `.studiocraft` project: `manifest.json (contract studiocraft/v1)` + `painting/ + vectors/ + companions/ + composite.png (rev-cached preview)`.
- Editable: photo<->vector only. Preserved: identity, names, ordering, visibility, transforms.
- Safety: unsaved / unsupported / from==to / non-editable target blocks with explicit reason. Save/reopen keeps natives. No global undo in v1.
- Provenance: storytold-ref engines + fleet-owned host, same adapter shape so our own crafts plug in later.

Non-goals v1

12-app editable canvas, RAW/HDR/EXR, crop/mask adapters, global undo, release/installer flows for the suite.

Fit test

Single model (shared project). Headless verbs (status/caps/init/open/handoff).

Files in/out (.studiocraft dir). 3 recipes: init+open, photo->vector clean,

vector->photo blocked-on-unsaved.

Complete MCP Tool & CLI Verb Reference

Tool	Op	Notes
`studio_status`	`status`	version, contract, engine probes (`down` when missing)
`studio_caps`	`adapter_caps`	editable photo+vector, preview light/design, fleet-owned host
`studio_init`	`project_init`	`path + name` creates manifest v1 + subdirs
`studio_open`	`project_open`	validates `contract == studiocraft/v1`
`studio_handoff_check`	`handoff_check`	`project/from/to + unsaved/unsupported` , allow/block + reason

Dotted aliases (`studio.status` , ...) accepted. CLI verbs mirror tools 1:1

via `studiocraft_core::dispatch` .
